

From Logistics to Data Governance

Global Asset Intelligence at Nokia

— Supporting operational visibility, compliance and decision-making through global asset governance.

CONTEXT

Multinational telecom environment. Operational control of **critical test & measurement assets** across deployment and integration projects.

Cross-functional work with technical teams, suppliers and global stakeholders — ensuring **continuity, traceability and compliance**.

CHALLENGE

Compliance risk and limited lifecycle visibility on strategic assets:

- Traceability gaps across equipment
- Calibration and operational control gaps
- Fragmented operational information
- Asset accountability and vendor complexity

ACTION TAKEN

Contributed to the **structuring of a global asset governance approach** for test & measurement equipment.

Standardized **tracking and lifecycle control** across regions.

Consolidated calibration, location, ownership and vendor data into a single view.

Enabled **compliance reporting** and audit readiness at global scale.

BUSINESS IMPACT

- ✓ Higher **operational visibility** on strategic assets
- ✓ Stronger **governance and compliance** posture
- ✓ End-to-end **lifecycle traceability**
- ✓ Faster **decision support** for technical and project teams

KEY CAPABILITIES

Operational Analytics · Governance & Compliance · Asset Intelligence · Decision Support

KEY TAKEAWAY

Transforming fragmented operational information into structured visibility for better business decisions.
